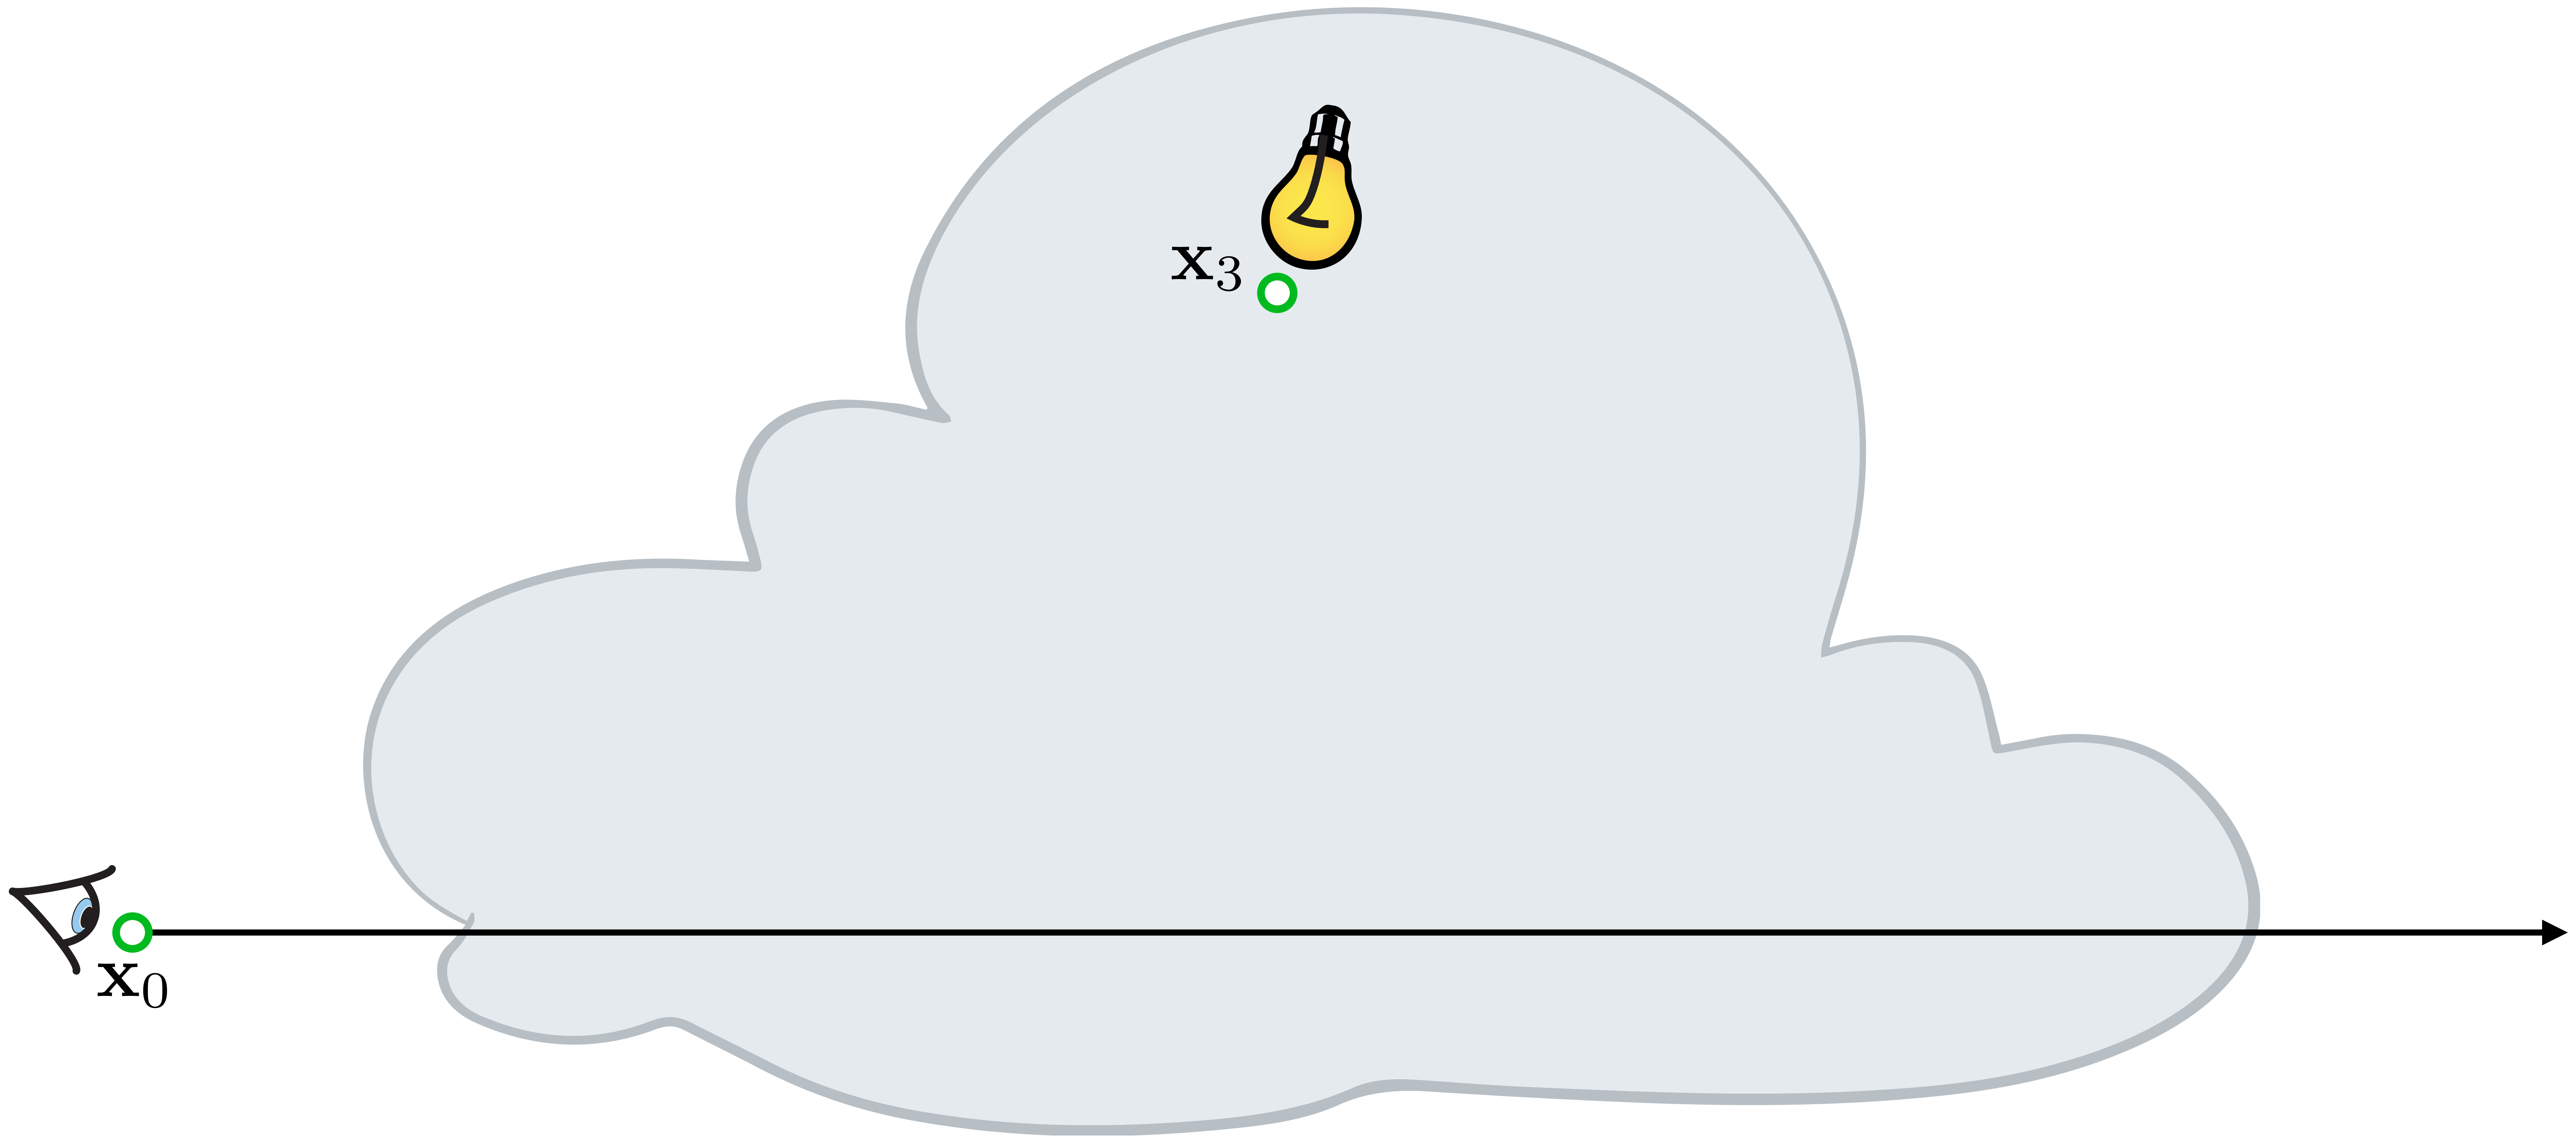
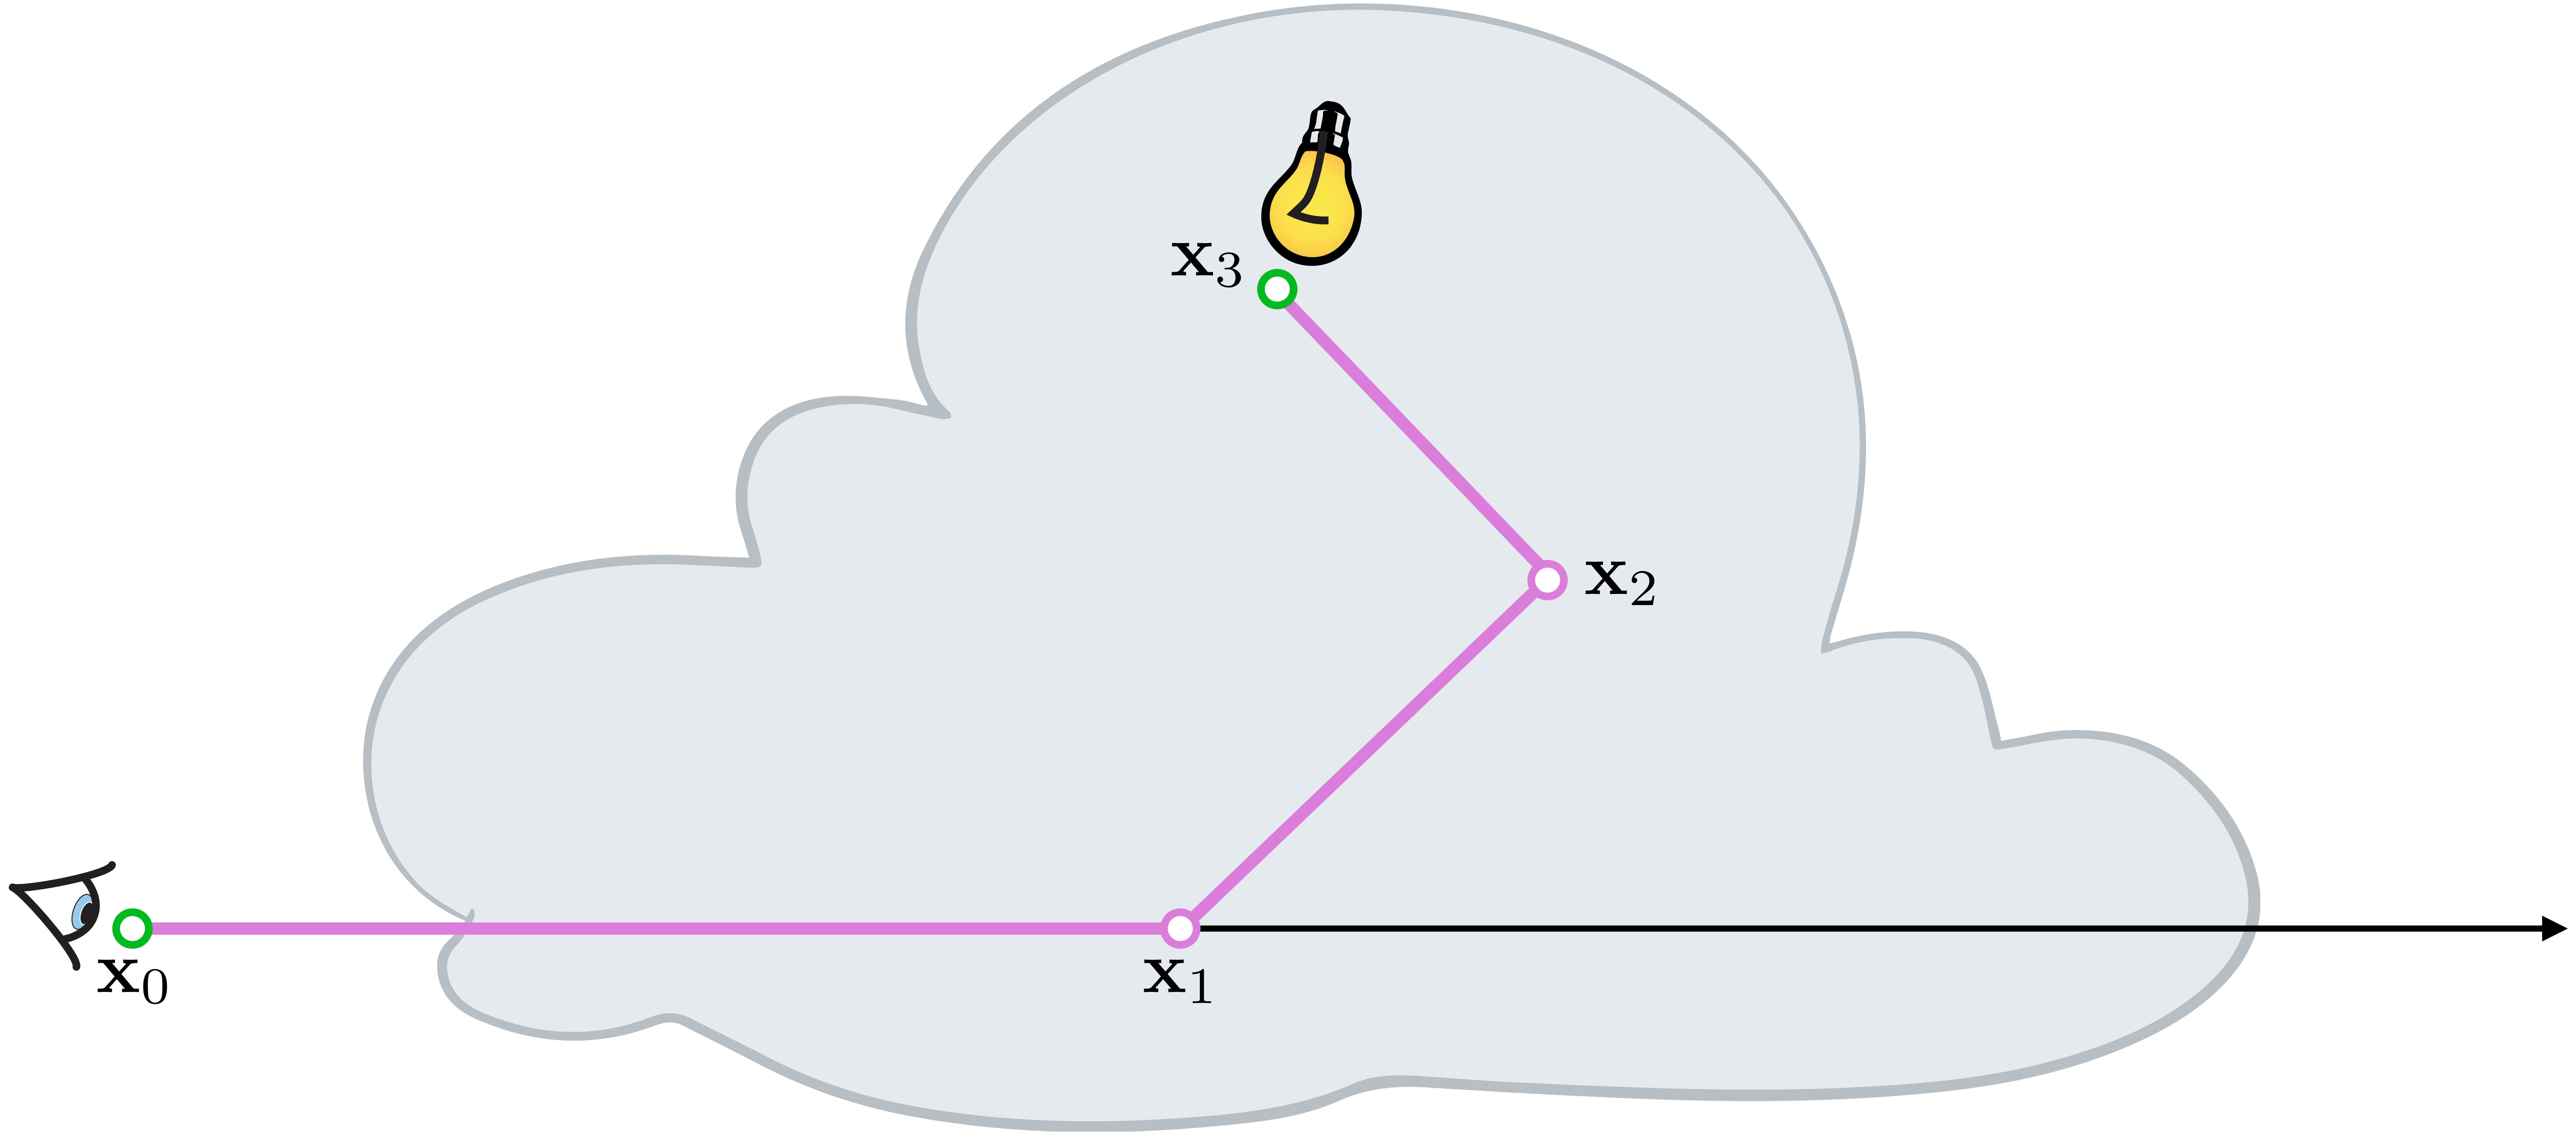
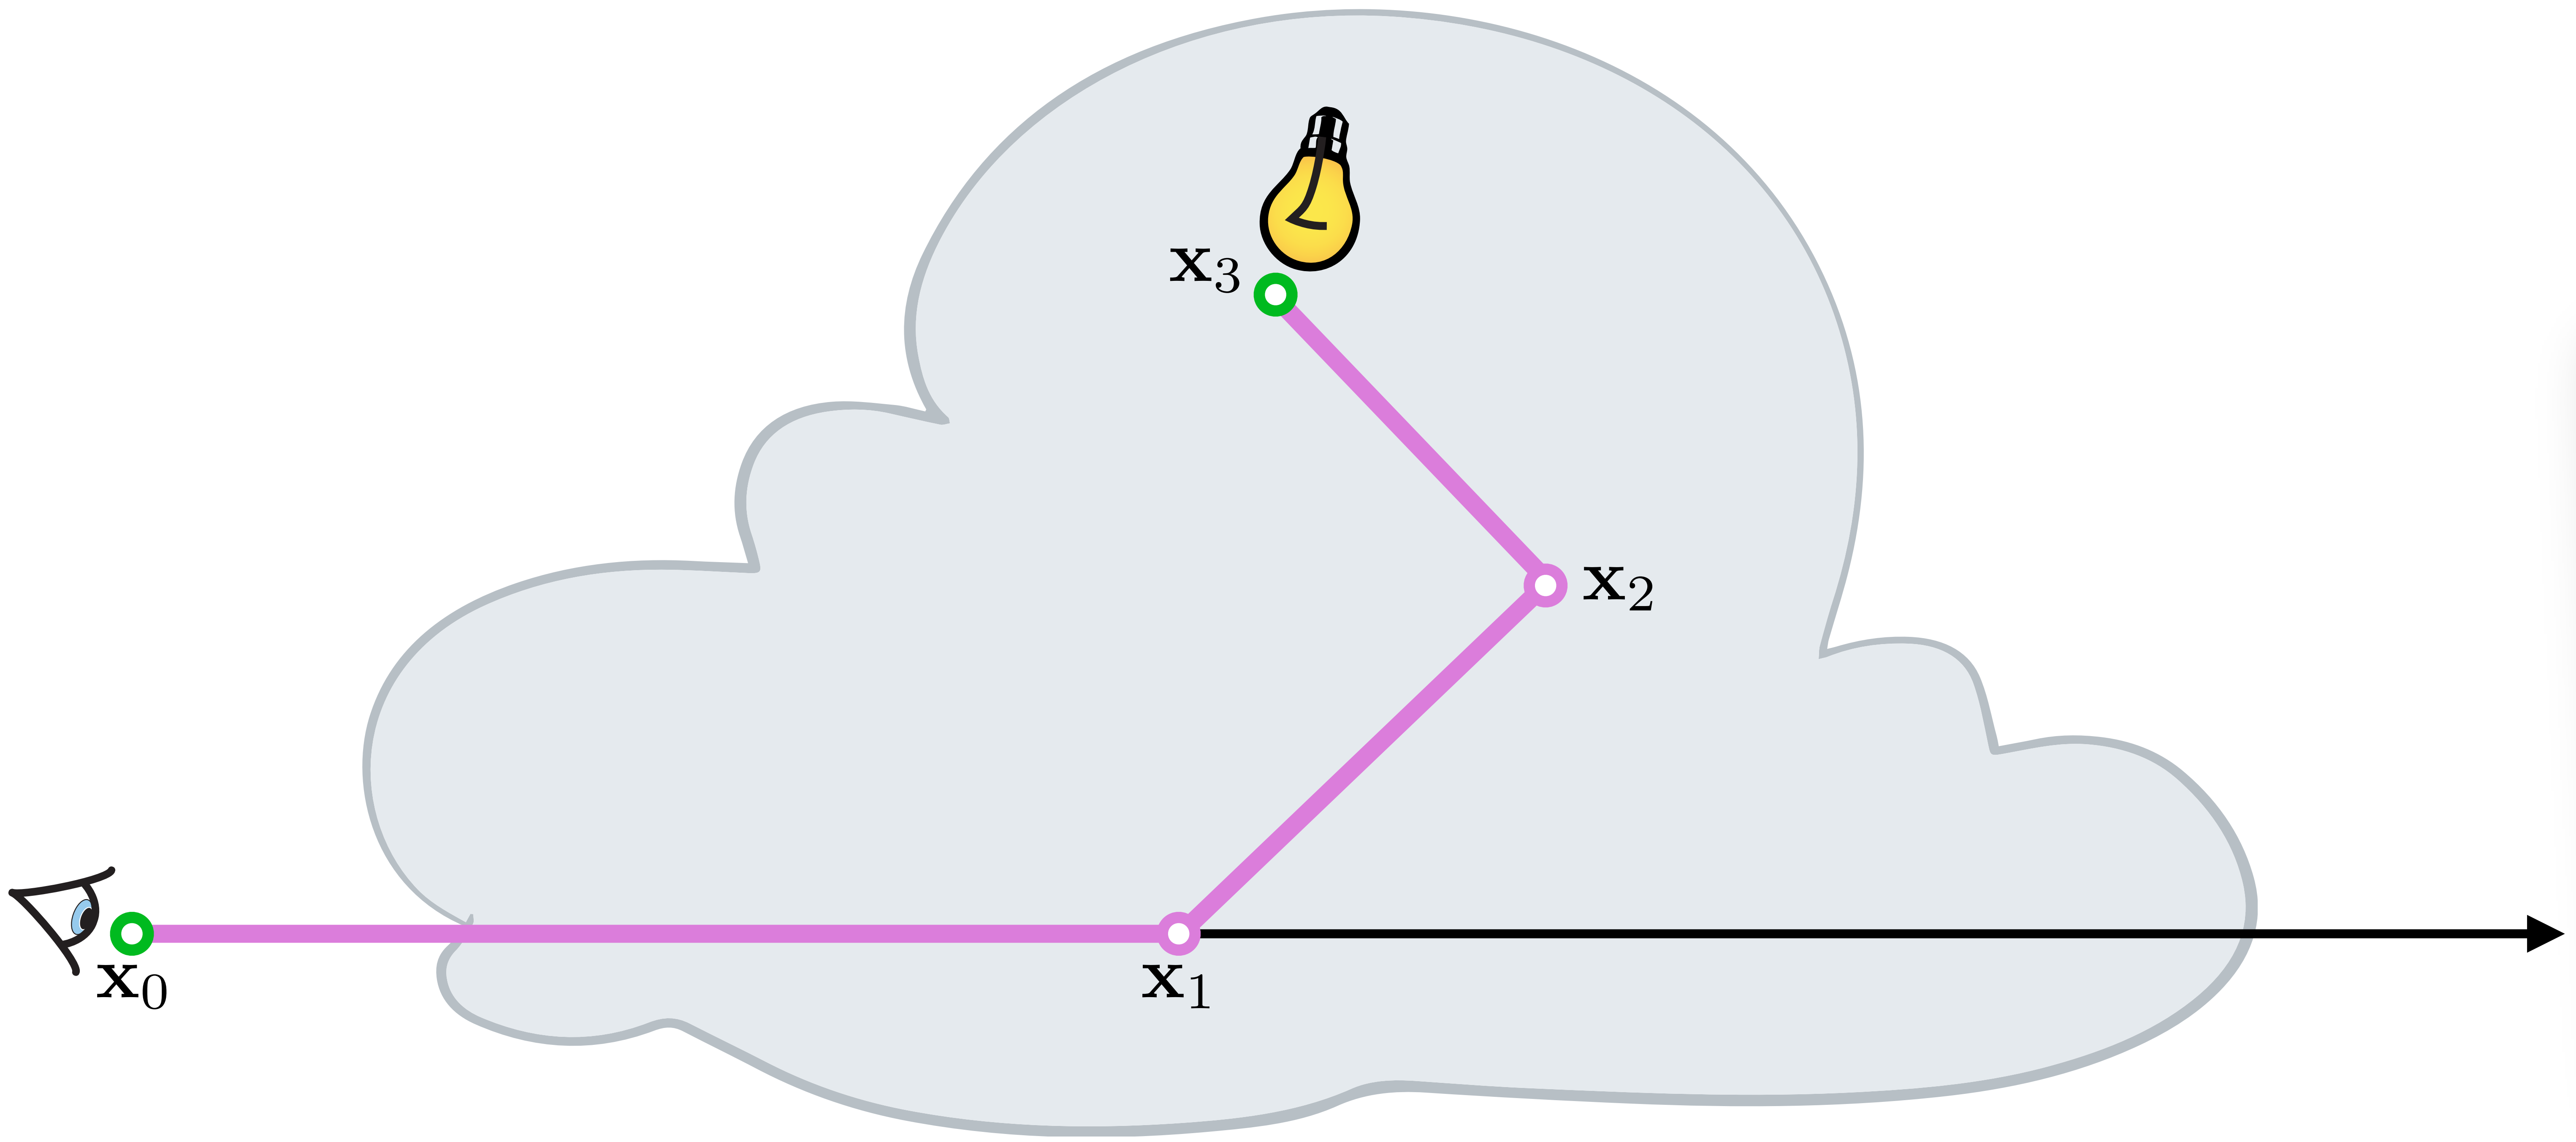
JOINT PATH SAMPLING



JOINT PATH SAMPLING



JOINT PATH SAMPLING



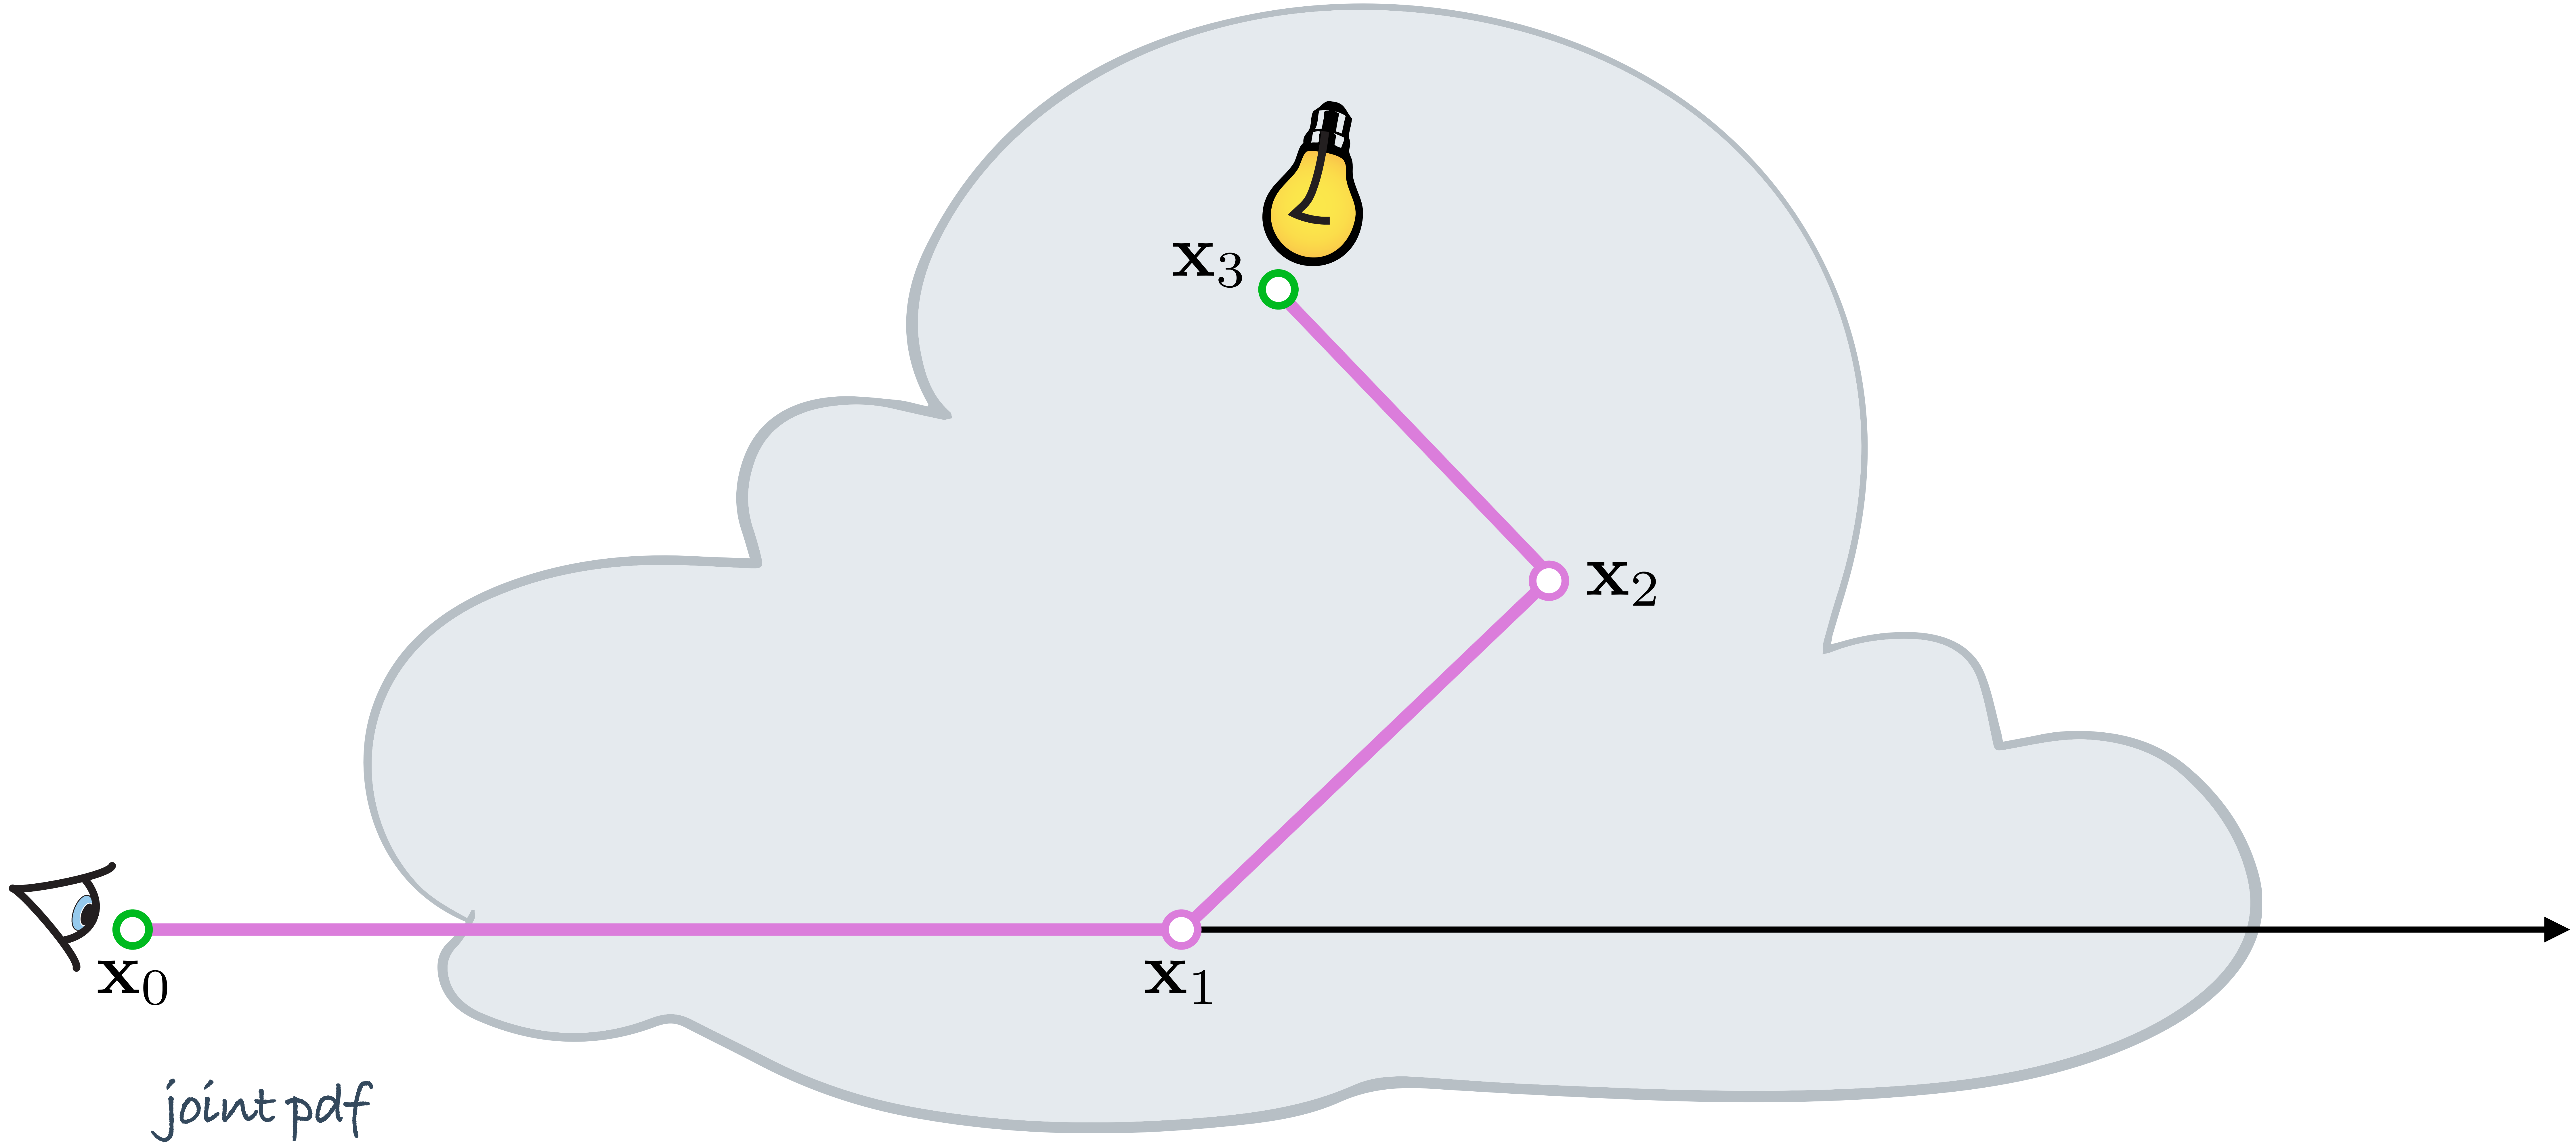
Joint path sampling:

1) Prescribe joint pdf
2) Derive conditional pdfs via successive joint pdf marginalization
3) Conditionals are obtained in reverse order

TRADITIONAL: prescribes conditional pdfs, no explicit control over joint pdf

JOINT SAMPLING: prescribe joint pdf, conditional pdfs derived from it

JOINT PATH SAMPLING



$$p(\mathbf{x}_1, \mathbf{x}_2) \propto G(\mathbf{x}_0, \mathbf{x}_1) G(\mathbf{x}_1, \mathbf{x}_2) G(\mathbf{x}_2, \mathbf{x}_3)$$

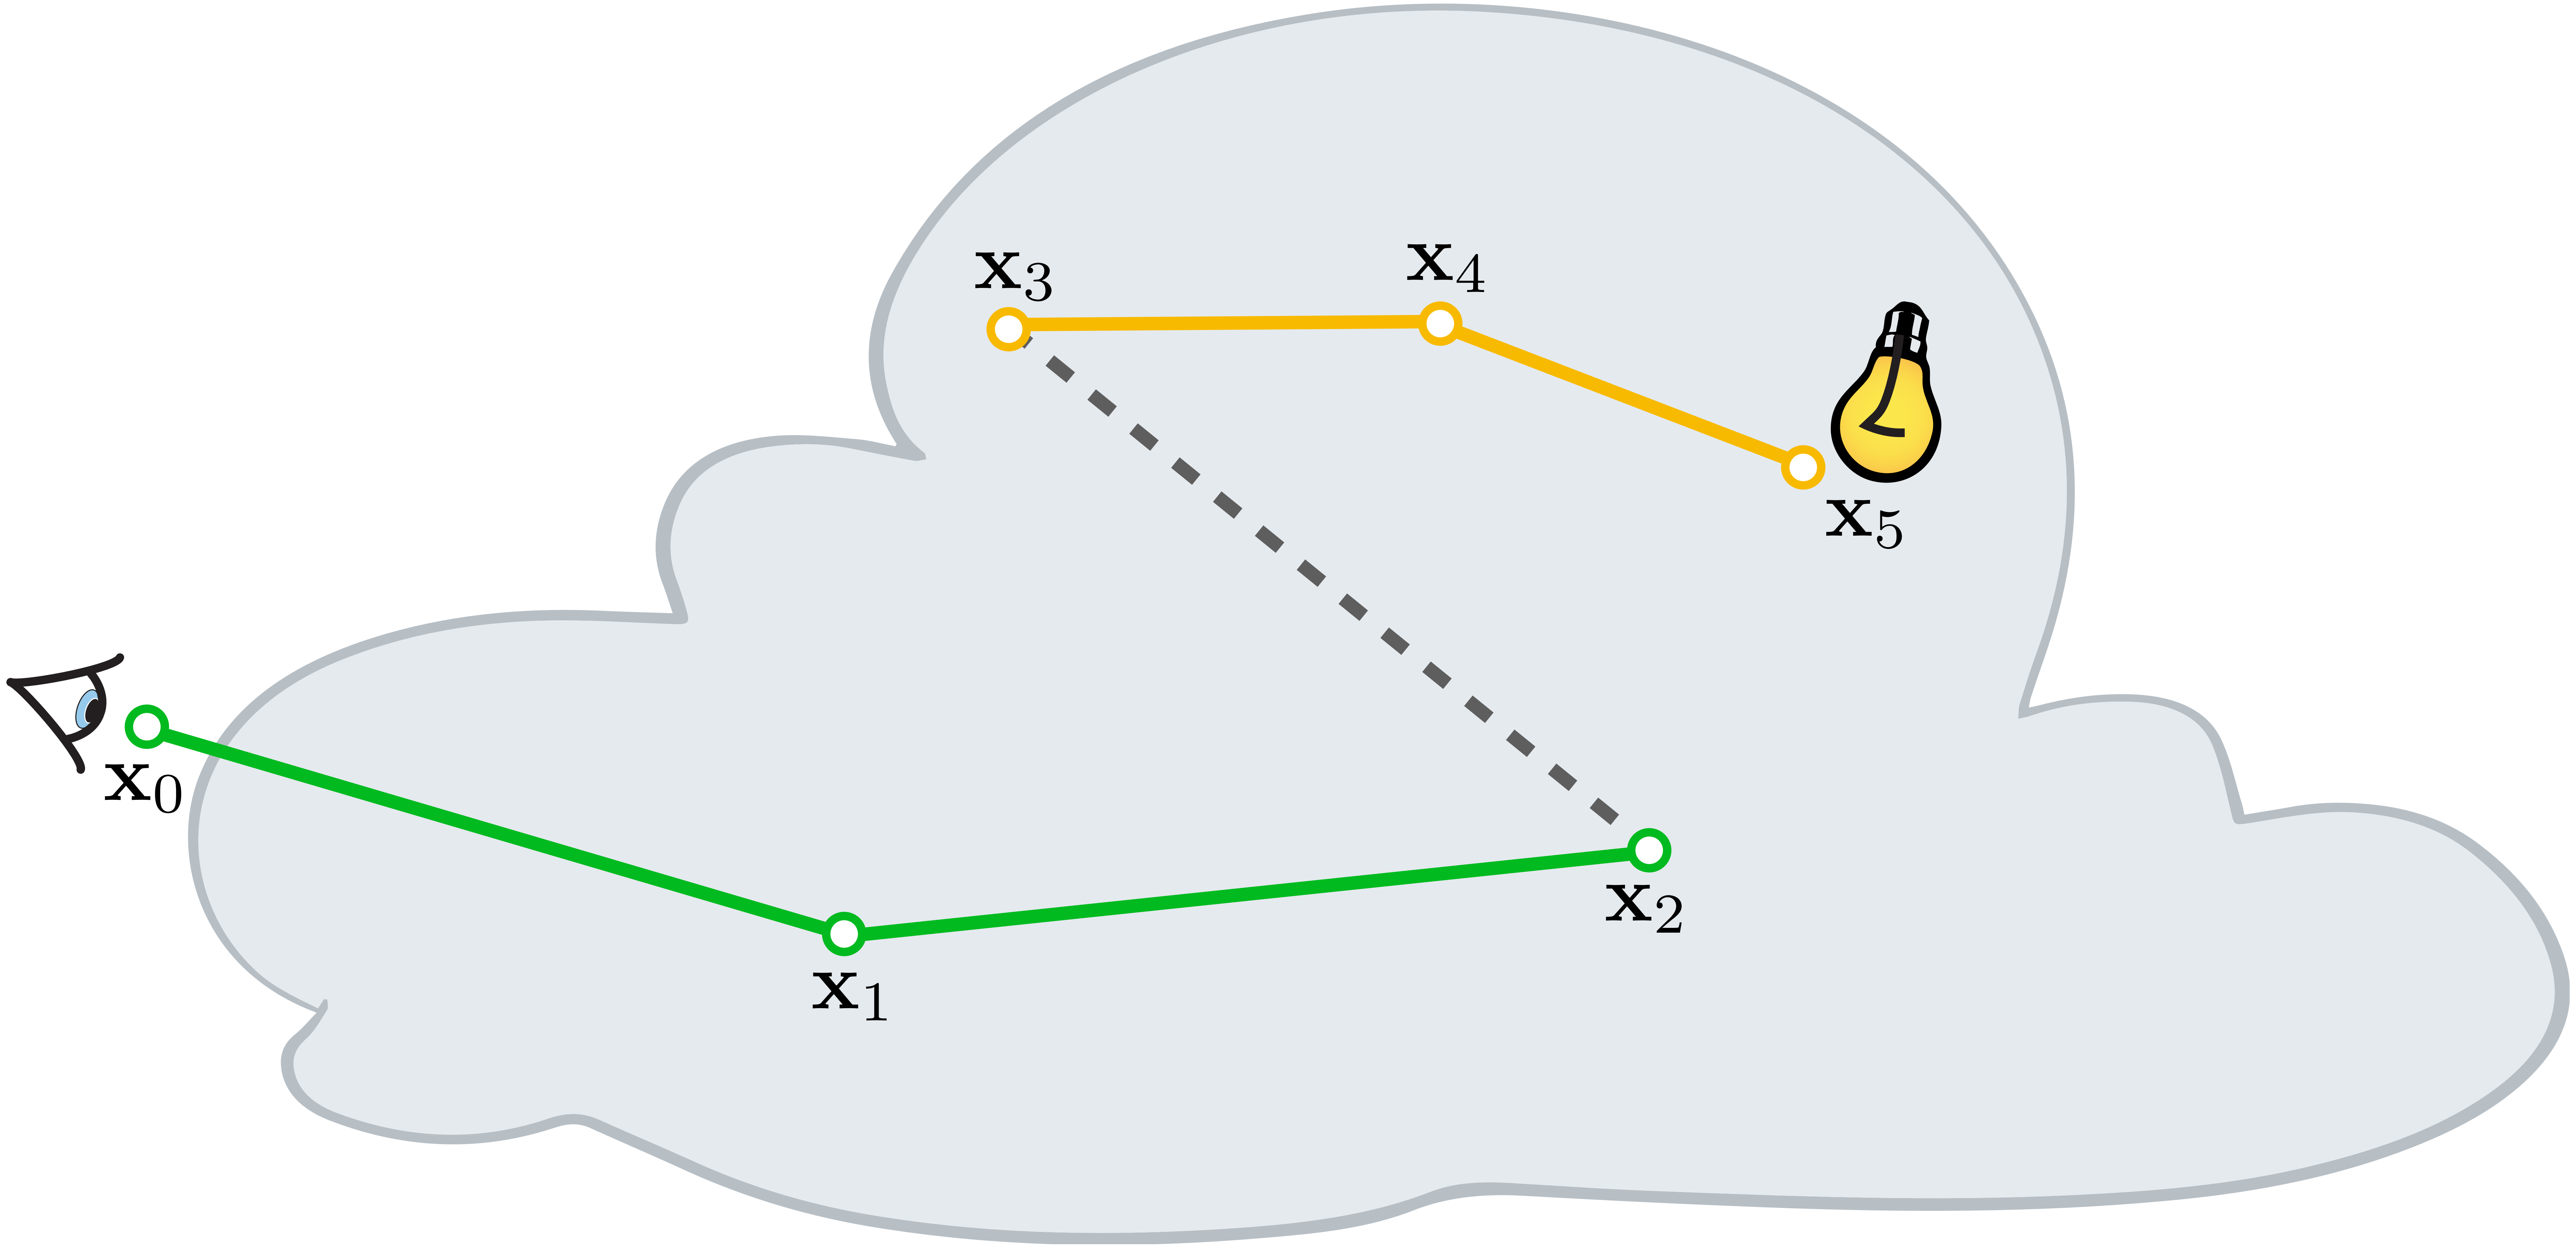
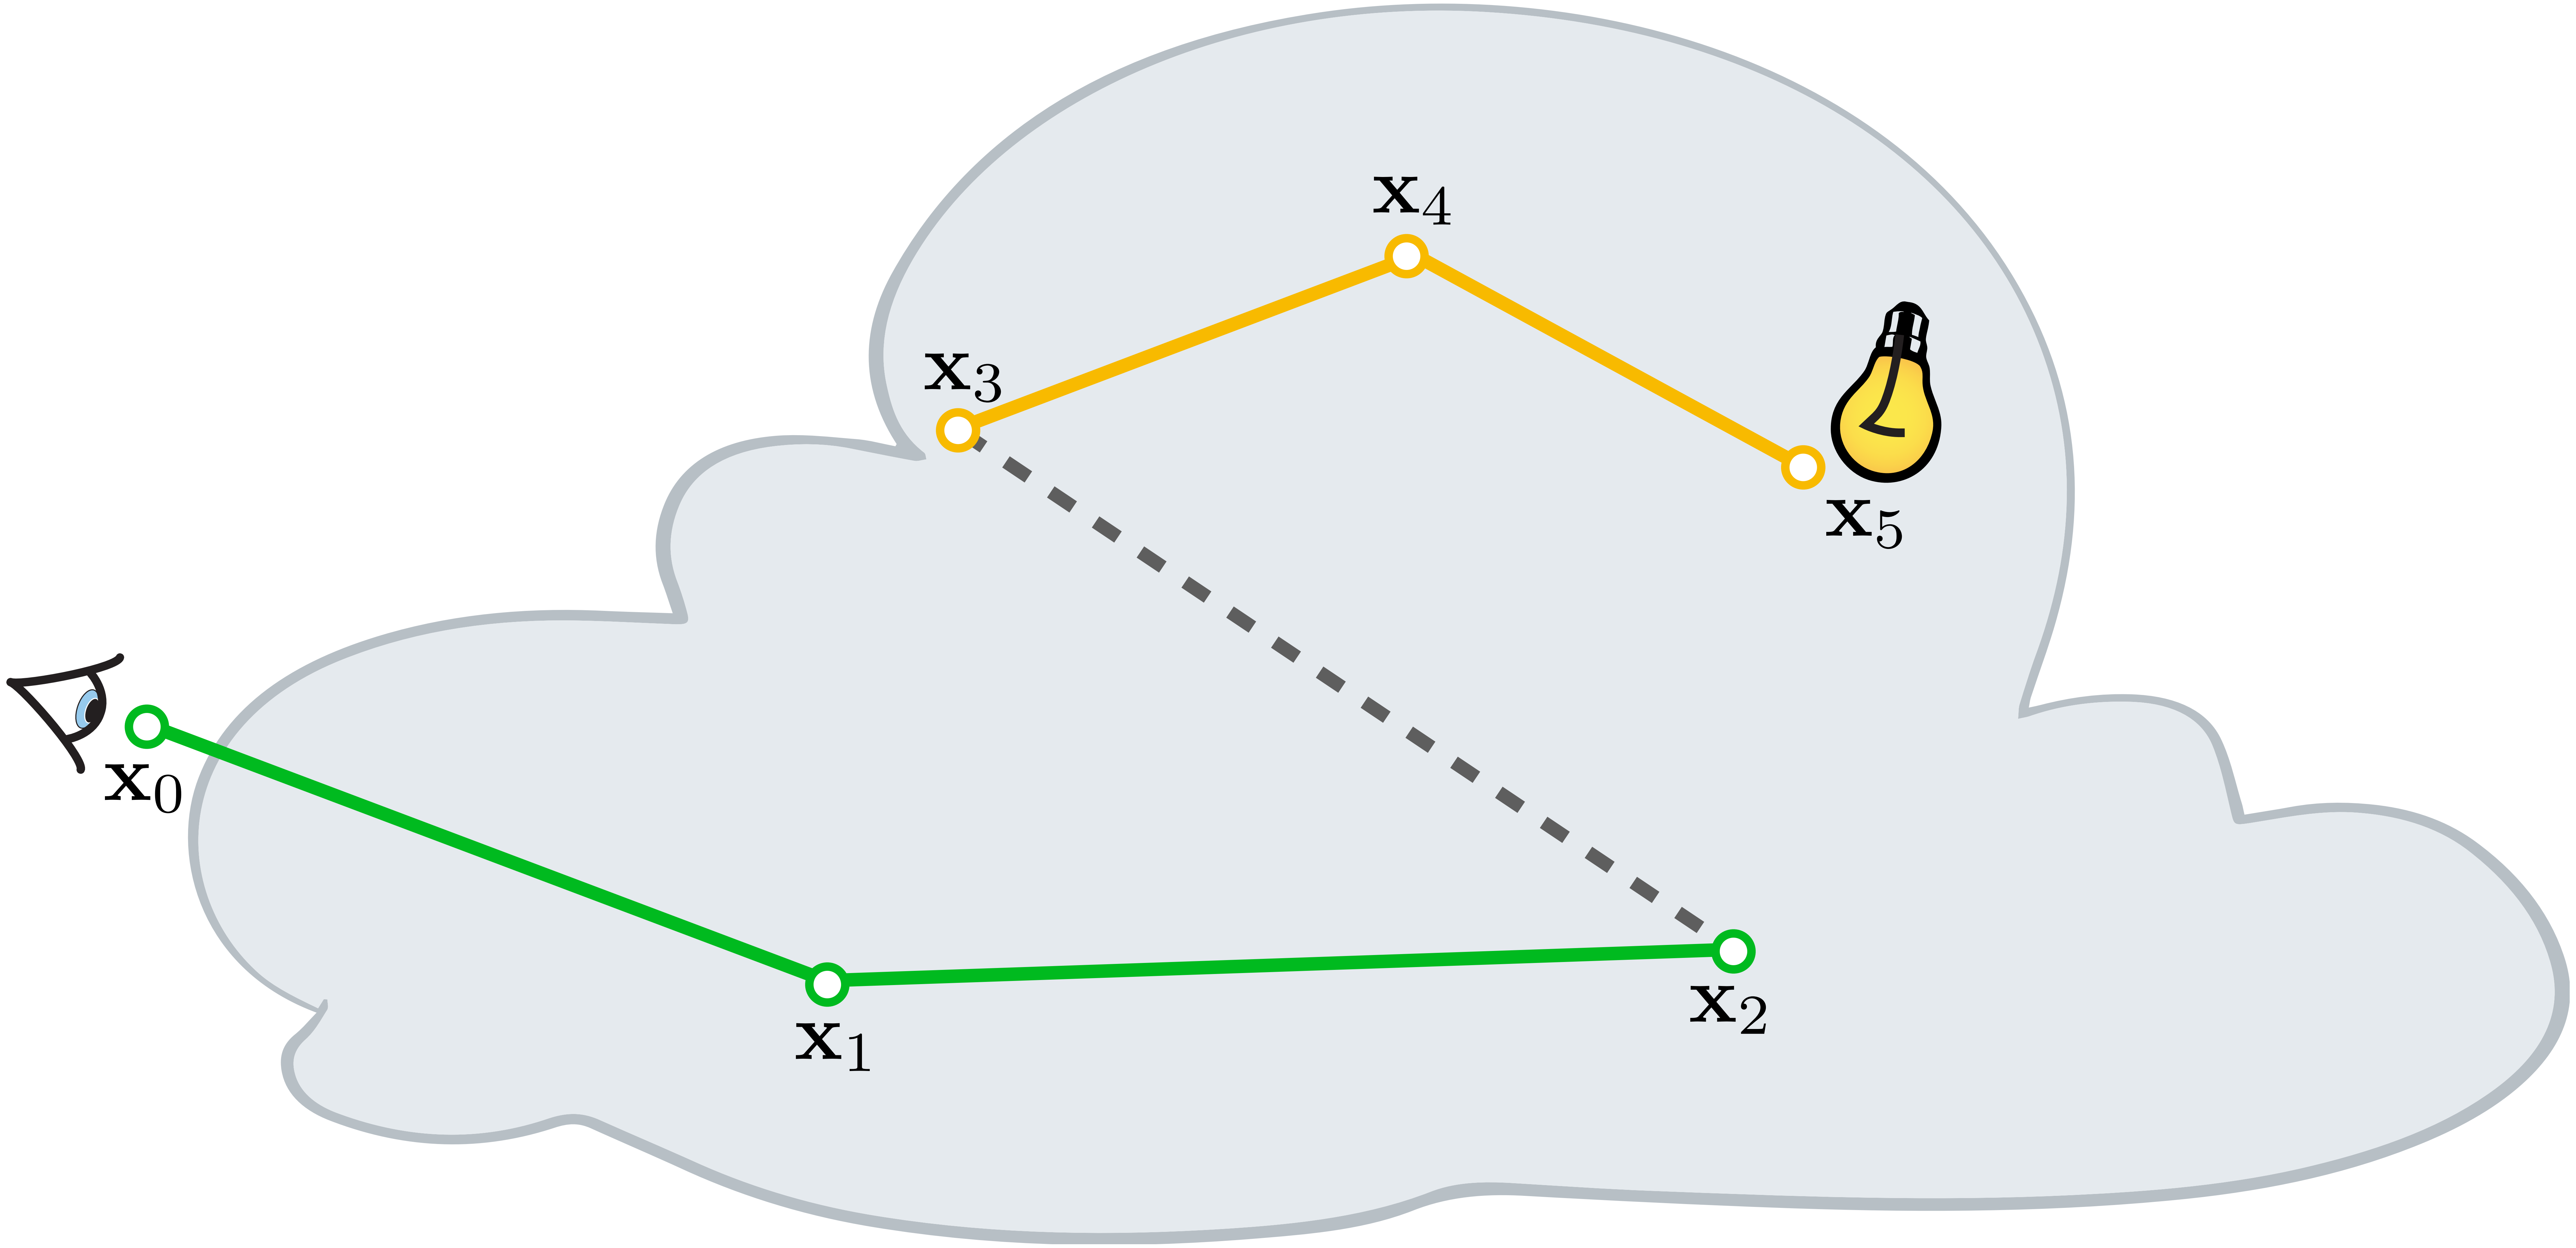
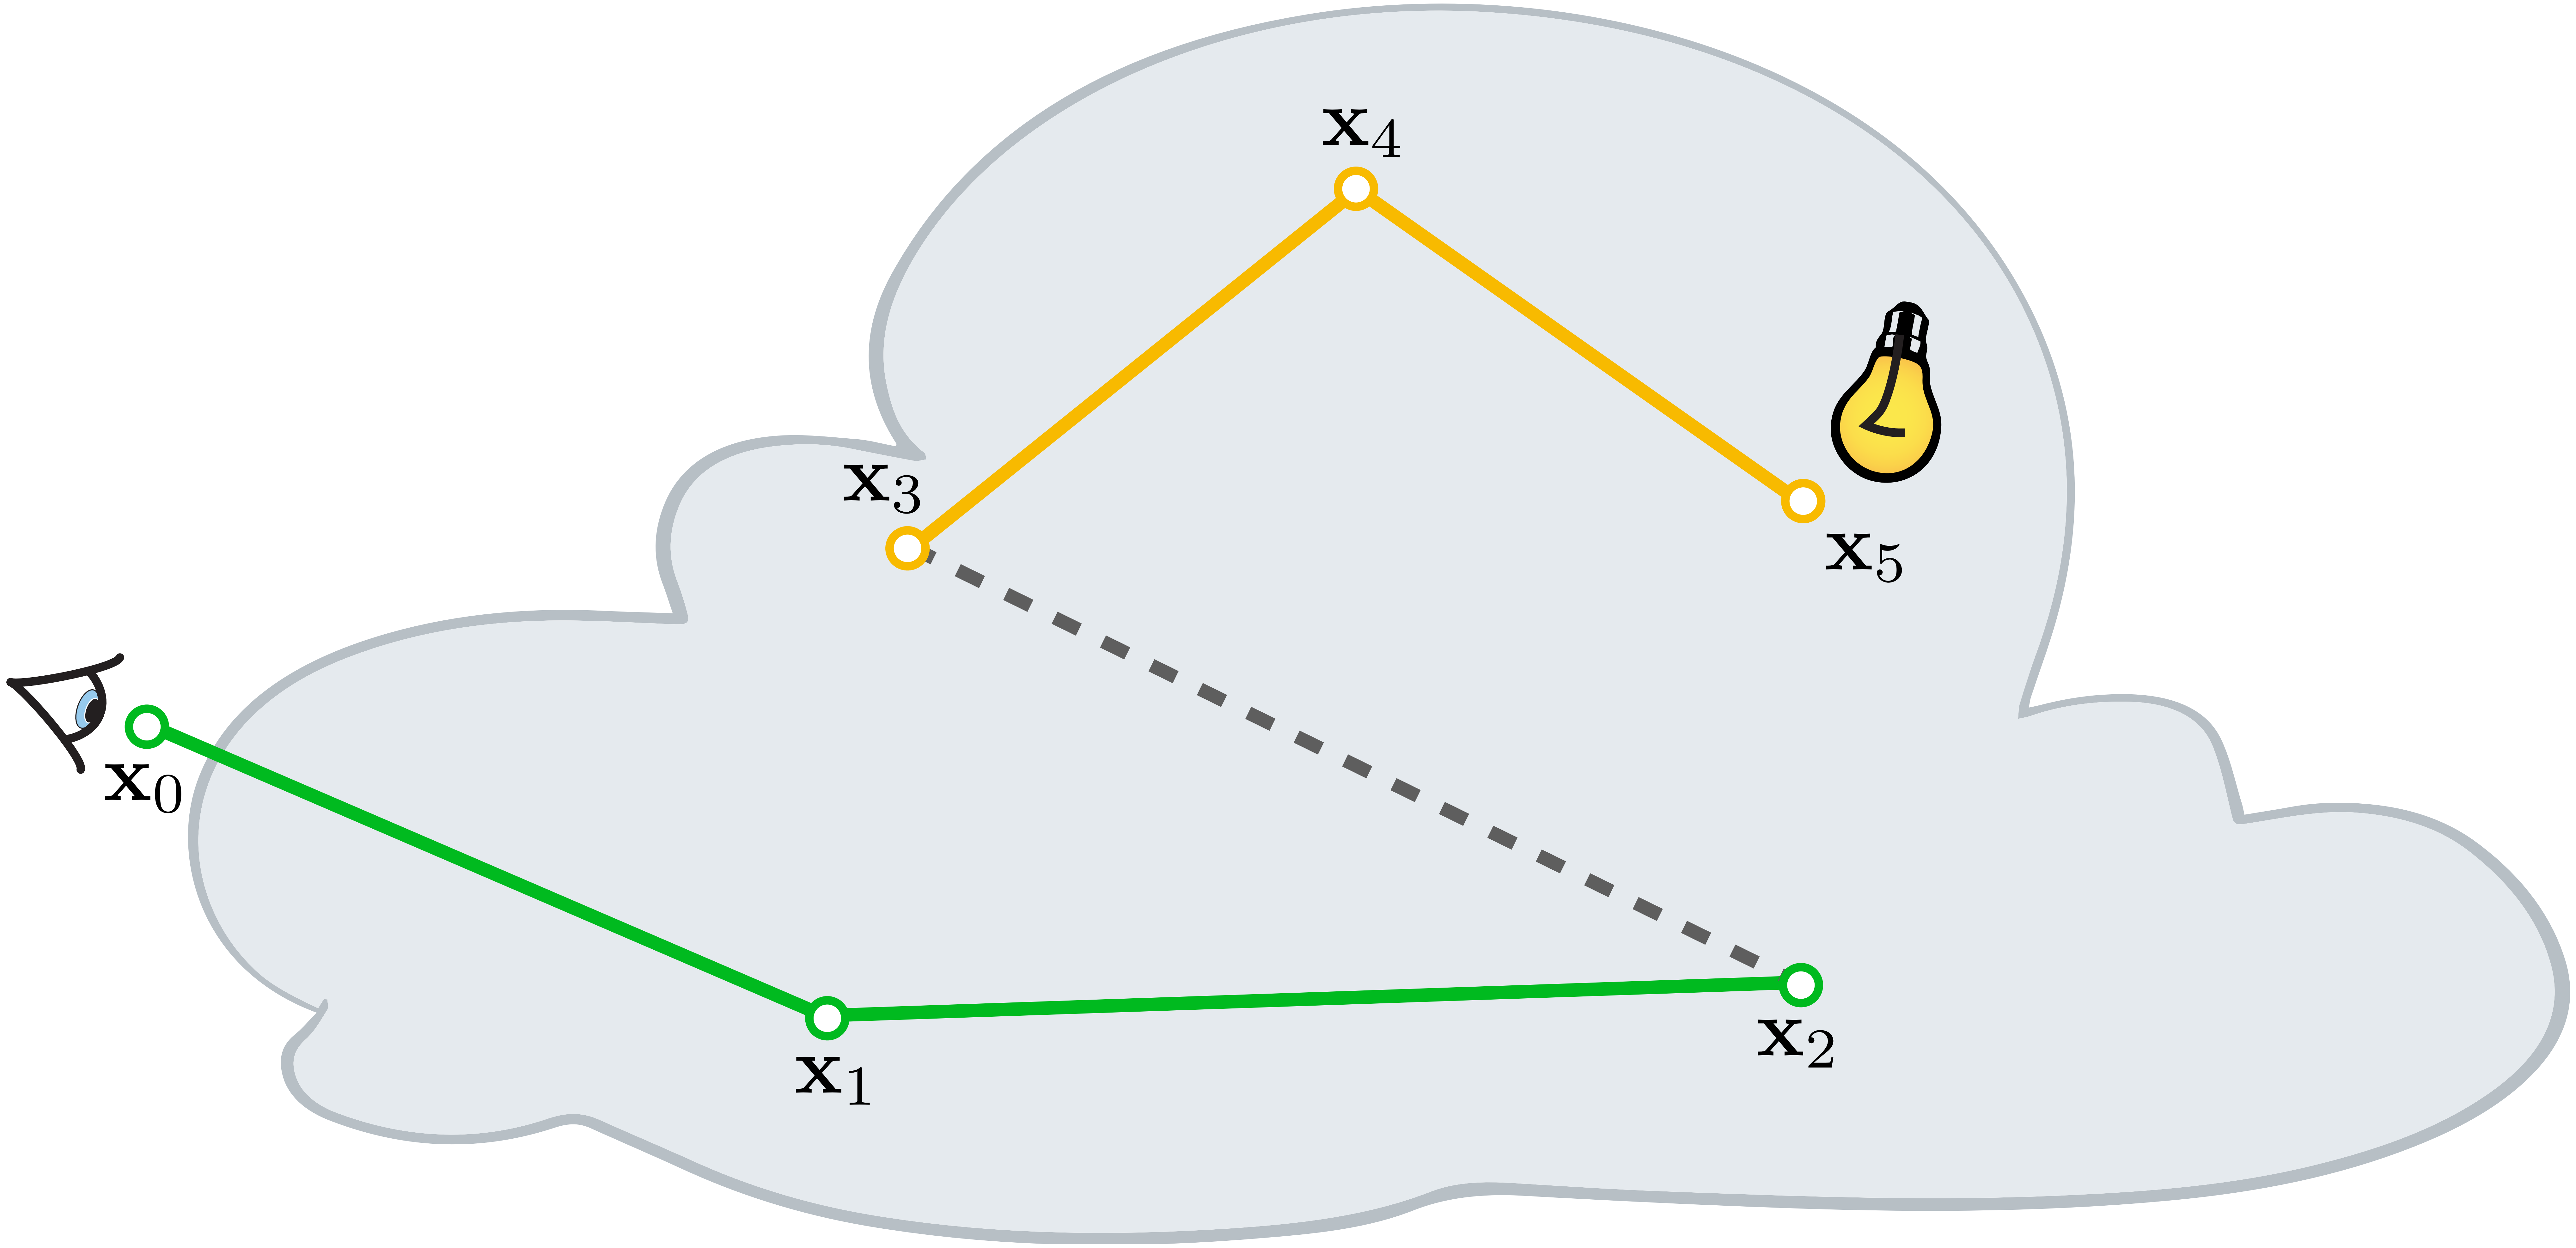
METROPOLIS LIGHT TRANSPORT



METROPOLIS LIGHT TRANSPORT



METROPOLIS LIGHT TRANSPORT



SUMMARY

UNIDIRECTIONAL SAMPLING

- Almost ideal on paper, rarely useful in practice

NEXT EVENT ESTIMATION

- Improvement, but singularity in indirect lighting (reduced convergence rate)

JOINT PATH SAMPLING

- Substantial improvement in the presence of singularities

BIDIRECTIONAL PATH TRACING

- Avoids singularities, more robust thanks to mixing many sampling techniques
- Difficult to implement

METROPOLIS SAMPLING

- Apply on top, great for very difficult illumination
- (Difficult to implement)^2
